

Abstract

An electronic device having a first surface positioned adjacent to an article worn by a person and a second surface substantially perpendicular to the first surface, the electronic device having a headphone connector interface for accepting a headphone connector, the electronic device comprising a clip coupled with the electronic device, the clip having a first segment positioned adjacent to the first surface and a second segment configured at a predetermined angle with respect to the first segment, wherein pressing the second segment toward the second surface rotates the first segment away from the first surface; the clip further comprising an adapter coupled with the first segment of the clip, the adapter positioned between the first segment of the clip and the first surface of the object and having an adapter length.
